Increased tube size plus complete speed control and epoxy coating equals super-duty performance, unmatched versatility, and superior oil pick-up capacity.

# Model 7V Brill® Tube Type Super-Duty Oil Skimmer

Brill tube type oil skimmers are designed to ensure consistent, even operation, regardless of the application

*why the*  
**Tube?**

## Efficiently Removes Oil

Brill tube type oil skimmers efficiently remove all petroleum-based oil, fats, greases, and oily wastes, as well as animal and vegetable oils that float on the surface of water.

## Oil Sticks to the Tube

Oil adheres to the outside of a closed looped tube, which is continuously driven across the surface of the water, then through a set of scrapers that remove the oil. The recovered oil drains into a collection tank.

## Unaffected by Floating Debris

Floating debris may cause problems for other types of skimmers by creating a dam in front of the skimming device. The debris prevents the oil from reaching the skimmer. However, the free-floating tube on Brill™ oil skimmers doesn't follow a fixed path and snakes over, under, and through debris to continuously pick up oil.

## Adjusts to Fluctuating Water Levels

The collector tube is durable, versatile, and easy to install. The tube continues to recover oil, floating up or down when water levels in the tank or sump fluctuate.

**When it comes to performance, Brill® tube type oil skimmers consistently outperform other types of skimmers.**
